

Select the edition that is right for you

> Entry Edition

Ideal for any size of enterprise looking to take a first step toward securing their network by obtaining an extensible audit tool enabling real-time discovery and traceability. It enables you to immediately answer the question - "who is doing what, where and with what device?".

> Entry+ Edition

Adds advanced real-time security and control capabilities to the baseline audit and inventory functionality provided in the Entry Edition.

> Enterprise Edition

The full power of the Network Controller at your disposal in order to increase security by unifying visibility, control and management. This edition includes all audit, reporting, security and management functionality. A separate system for advanced reporting as well as a high availability module are available as options.

> MSP Edition

Includes all of the functionality of the Enterprise Edition. This version is specifically designed to enable MSPs to increase their productivity and to up-sell existing customers with additional value added security services.
